

00:16:26 Dee-Ann Decker: Please ask questions here in the chat. We will forward the questions to Johanna after the presentation

00:24:58 Neil: The State Park is heavily booked all season. Why the need to spend money to provide sites with electric and water for RVs?

00:28:39 Mandie: Not so sure about adding addition boat launches, doesn't the state care that the campers are probably responsible for bringing the milfoil to our lake, which we are managing but not irradiating... and we are doing this alone as a community without state help

00:30:18 Pam: Thanks for eliminating the additional boat launch. Our milfoil problem cannot withstand the extra unmonitored boat traffic.

00:31:21 Pam: Will there be rules about RV campers dumping grey or black waste water?

00:31:26 Samsung SM-S901U1: what is the current occupancy rate of the State Park? If it is high, why add?

00:32:26 Neil: New sites will create lots of new herd paths to the water along with a lot of new places for boats to moor at then ends of these herd paths that will create moe erosion. Any plans to mitigate those impacts?

00:32:38 Pam: Will the State increase the budget of the State Park to allow for staffing to meet the needs of all the new campsites?

00:34:04 MHeselton: I came in late, couldn't figure out how to run zoom. I saw plans showing a water access area (for swimming) in the channel by the bridge. I feel that is a safety hazzard for everyone. It is a nightmare getting boats through when the lake is busy, I think adding swimming is just a terrible idea. In addition the park has issues enforcing campers from jumping off the bridge which is posted not to jump off it. I am also wondering how island sites will be maintained so there isn't any pollution added to the lake.

00:34:06 Mandie: Yes you would see more money if rvs get water electric but is that worth the possible issues and environmental impact

00:35:34 Pam: (This is from another person unable to attend) We need funding to help us with our milfoil problem. We are already expending money and volunteer time to do all that we can. What about some of the ARPA funds fort that purpose?

00:35:59 Mandie: How can you help us with the milfoil problem?

00:36:47 Erika Fowler: The state may be making money, but what about the environmental hazards? The milfoil is spreading faster because visitors who boat here travel thru the milfoil and spread it through the lake.

00:36:54 Mandie: We don't want the park to become a highly developed campground like Hampton beach

00:37:14 Erika Fowler: Another concern is about over population.

00:38:09 Steve: Thanks for talking to us,will there be boat washing staions

00:39:18 Erika Fowler: Our priority should be keeping the lake sustainable and safe for the wildlife

00:39:31 Melina S. & Nikki G.: Would like to hear from Steve about his thoughts on this project. Could he have some time to talk?

00:42:03 Mike: Even though a new boat launch has been eliminated from the proposal, will there be an upgrade to the present canoe/kayak launch?

00:42:38 Nan's Ipad Pro: Is potential increased boat traffic on the lake a consideration when deciding how many additional campsites to add? Capacity of the park beach?

00:43:17 Mandie: Boat washing is a great idea, if we don't address the milfoil issue the campground won't have visitors and there won't be more money

00:43:46 Erika Fowler: Nothing should be happening until the lake is clean. Our community really cares about our lake and we don't want anything added to our community that could negatively effect the wildlife. This is not just a community thing, this is a state issue.

00:44:10 MHeselton: Is the water access area specifically for swimming in the channel area near the bridge? Can that be moved elsewhere to avoid safety hazzards?How will island sites be maintained to minimize/eliminate pollution to the lake?

00:44:16 Melina S. & Nikki G.: How about an education facility that all campers bringing in boats are mandatory to stop in and watch educational video about the milfoil situation and expectations/protocol before putting boat into water?

00:44:50 Samsung SM-S901U1: Has the State considered something more drastic related to power boats brought by campers such as adding dock space to prevent erosion from campers docking at sites? or, adding a fee to bring power boats that we can put to invasive species education and prevention?

00:45:45 Melina S. & Nikki G.: When I went to Oahu, I had to watch a video about expectations for protecting the environment and coral reef before entry into the bay/beach.

00:46:18 MHeselton: My husband would like to know if there will be any road maintenance with the addition of campsite?

00:47:08 DJ Fowler: Is there any type inspection at the parks boat launch before entering the water similar to the Fundy Cove launch?

00:47:32 Erika Fowler: Yes Milfoil is a DES issue. But we all live in the state of NH and should care for it. What can be done and built that can help with this issue. Such as some type of building structure!! This is not a one way issue as these suggestions that are being made will cause a domino effect as it has already.Proven to.

00:48:41 Mandie: The state park should know — there have been campers using the marked milfoil floats our community has placed to swim out to and float on, and swim and play on — why isn't it being communicated to incoming campers these floats should be avoided

00:49:10 Melina S. & Nikki G.: Please allow Steve to speak on behalf of the PLIA.

00:49:44 MHeselton: Please ask about how they will enforce policies for safety. Like being too busy through channel near bridge for swimming and island maintenance.

00:50:39 MHeselton: Or let me know someone can contact me in regard to those. My email is my3ndl@yahoo.com Thank you. (Meg Heselton)

00:52:01 Erika Fowler: A great upgrade could be for the nature walks and creating buildings for the walk. Similar to Jericho state Park. These walks could be intertwined with the campground.

00:55:07 Melina S. & Nikki G.: It needs to be mandatory education

00:55:15 Melina S. & Nikki G.: for anyone bringing a boat.

00:55:41 Samsung SM-S901U1: I have been an avid camper for 13+ years. I dry camp.and full hookup. I still don't see why we need the upgrades. the

00:55:41 Melina S. & Nikki G.: Sinage is a good reminder, but not everyone will read it.

00:55:44 Mandie: Campers have been fully booking the campsites regardless whether we have these new amenities or not they'll still want to book as long as we can be responsible for the lake and environment

00:56:07 Samsung SM-S901U1: The park is full, and we dont lose revenue due too limited amenities. a

00:56:19 Mandie: Exactly

00:56:27 MHeselton: how can i contact this woman speaking for the park?

00:56:44 Melina S. & Nikki G.: Tune into PBS NH at 9 PM!

00:57:05 Melina S. & Nikki G.: All about Nottingham

00:58:00 MHeselton: where is it being posted
